Ms. Rogers;

Sorry for the delay in responding to your email. We have been applying manure and didnt take the time to take pictures until this weekend. I tore two ligaments in my knee in September and am just now getting to be able to do very much so we are behind in completing the projects. The depth gauges are in. The compost building is under roof but still needs the exterior walls and the partitions between bays installed before it is complete. That should take about a week and then we will do the storm water diversion at the east finishers. I have attached photos of the depth gauges and the partially completed compost building. We have done all the work ourselves so I do not have any contractor invoices to send. I do not have any design plans to send for the compost building or the storm water diversion. The compost building is 80 ft by 20 ft consisting of 8 10ft by 20ft bins. The storm water diversion will be a channel between the finishers and the lagoon that will route the water around the lagoon and not allow it to enter the lagoon.

Thank you
